

Feeding adult dogs on a BARF (Bones And Raw Food) diet

It is generally considered that your adult dog should consume around 2% - 3% of its own body weight per day. Variable factors like lifestyle, appetite and temperament can all impact on a dog's weight.

Below is a guideline only which should **include bone**.

Weight of dog	Food per day
2-4KG	40-60g
4-10KG	80-200g
10-20KG	200-400g
20-30KG	400-600g
30-40KG	600-800g
40-50KG	800-1000g
50KG plus	1500g plus

If you are unsure about how much food to give your dog, please get in touch, we are happy to help.
